

**American Wholesale Lighting** can help you give your medical facility and patients the required lighting they need.

Whether you are lighting a surgical suite, patient room, reception area, or imaging suite, American Wholesale Lighting understands each of these areas has unique and strict requirements. We will work with you to design the ideal lighting package that follows the Healthcare Lighting Best Practices without sacrificing aesthetic appeal.

Research shows architectural designs should consider a human-centric approach adding as much natural light as possible, without sacrificing the rigorous and necessary requirements for the space. When using natural light is not an option, we can assist you with fixture choices that emit an array of blue light LEDs that can mimic natural light.

***Other equally important considerations when choosing light for your medical facility.***

- *AWL understands the stringent requirements of light fixtures sealed for infection control for your facility.*
- *The importance and ease of strict cleaning protocols and maintenance.*
- *Health benefits of installing the correct lighting (ex. human-centric lighting).*
- *Providing reliable, specialized, and effective illumination for each area of your facility.*

Our team will review with you the preferred lighting options for your facility and help you determine the most cost-effective package to improve the quality of lighting for your staff and Patients.

We also offer an array of UV lighting that has been proven to kill bacteria on surfaces, disinfect the air when used in air handlers, and personalized disinfection units. What better way to build your patients trust and confidence than letting them know you have installed the latest groundbreaking disinfection and sterilization technology available in your locations for their safety and that of your employees.

American Wholesale Lighting has been providing our clients with exceptional service and the latest lighting technology for over 35 years. We take pride in servicing multiple market segments regionally, nationally, and internationally and believe the customer deserves the best, and that is what we deliver.
